About the Program [1]

Supported with funding from the National Institute of Environmental Health Sciences’ Superfund Research Program [2], the Iowa Superfund Research Program is comprised of 17 scientists and engineers from 5 colleges and 2 universities.

Working with our partners, we bring a broad range of expertise to bear on public health problems associated with Superfund chemicals.

Our research projects are supported by six cores—Administration [3], Synthesis [4], Analytical [5], Training, [6] Research Translation [7], and Community Engagement [8].

The program started in 2006 and is directed by Dr. Keri Hornbuckle.
